

It's been said that one little butterfly
flapping its wings can change
weather patterns thousands
of miles away.
You have that power, too.

What is ENERGY STAR®?

ENERGY STAR is a partnership with the U.S. Environmental Protection Agency that offers consumers and businesses energy-efficient solutions, making it easy to save money while protecting the environment. While you may recognize ENERGY STAR from computers or other products, it can be found to identify high performance office properties across the U.S.

Hines, who manages over 70 million square feet of office space world wide including the building you are in now, is helping your organization meet its financial and environmental goals. To date, Hines saved energy that resulted in reducing harmful global warming gasses equivalent to eliminating the emissions from 24,000 autos from the road. Hines is an award-winning leader in preserving our natural resources through increased energy efficiency. Hines strives to deliver the high standard of service you deserve so you can focus on your organization's continued success.

What can you do to help?

- Turn off lights and office equipment at night and on weekends
- Turn on the ENERGY STAR power saver feature on your computer
- Make sure your office equipment is also powering down ("sleeping") when not in use
- Draw the blinds on warm, sunny days to keep the excess heat out
- Use the stairs where it makes sense.

Hines continually strives to identify ways to use energy resources more efficiently.

Hines thanks you for your thoughtful efforts. Each of us can help protect the planet for generations to come.
